

INSCIGNIS 2018

Event: Interactive Talk

Venue: Dept. of Environmental Sciences

Resource Person: Dr. Samshul Ali, Wildlife Veterinary Surgeon at Wildlife Trust of India, Kaziranga National Park

Prologue: A curious mind once observed a naive yet generous boy displace a snail slugging on road, to nearby grass lawn in order to save its life. To the observer, the kind act of the boy seemed to put the snail back to the initial of its journey-of-the-lifetime to see the other side of the lawn.

Food for thought?

Most of us love nature and its wild and tameable inhabitants and will to go extra mile to show our care. However, do we really understand the need of the animal we are supposedly rescuing or rehabilitating? This INSCIGNIS 2018 we are providing you the opportunity to learn more methodological and requisite rescue and rehabilitating techniques and information for wildlife rescue. Dr. Samshul Ali, Wildlife Veterinary Surgeon at Wildlife Trust of India, Kaziranga National Park will be conducting an interactive and practical workshop in order to prepare us to show our concern towards animals in a more target oriented and professional way.
